                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               60
```

US-09-240-274-144

Sequence 144, Application US/09240274
Patent No. 6255455
GENERAL INFORMATION:

```
GENERAL INFORMATION:

APPLICANT: Siegel, Donald L.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

FILE REFERENCE: 09596-42U2

CURRENT APPLICATION NUMBER: US/09/240,274

CURRENT FILING DATE: 1999-01-29

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER FILING DATE: 1998-04-10

EARLIER APPLICATION NUMBER: 60/028,550

EARLIER APPLICATION NUMBER: 50/028,550

EARLIER APPLICATION SUMBER: 50/028,550

EARLIER FILING DATE: 1996-10-11

NUMBER OF SEQ ID NOS: 224

SOFTWARE: PATENTING DATE: 2.0

SEQ ID NO 27

       Pred. No. is the number of results predicted by chance to avecore greater than or equal to the score of the result bei {\bf j} and is derived by analysis of the total score distribution
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB DB

 The invention relates to producing gene libraries, comprising immunoglobulin light and heavy variable region. The method involves selecting light chain that binds with the heavy chain product to produce a functional conformation, producing a gene library comprising a collection of these light chain variable genes, and combining with gene library of heavy chain variable genes. The method is used for production of gene and antibody libraries.
 Producing gene libraries and antibody libraries, involves selecting a light chain that binds to a heavy chain product to produce a functional formation, and producing a gene library of the light chain variable

 This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TMF) super family and induces B cell the CC proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antitheumatic and antiAIDS activity and can be used in vaccines to CC inhibit the expression and activity of BLyS. The antibodies bind to BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC discasses, seek to treat diseases associated with aberrant Expression of BLyS. They may also be and activity such as cancer, immune, and autoimmune disorders and CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and CC cquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent CC of the antibodies and fragments of the antibodies described in the method CC of the invention

 expresses VEGFR. It is also useful for inhibiting growth of colon tumou or non-small cell lung carcinoma (NSCLC) and tumour overexpressing EGFR It is preferably useful for treating subjects with both solid tumours preferably high vascular tumours and non-solid tumours. The inhibition or reduction of tumour growth includes prevention or inhibition of the progression of tumour, including cancerous and non-cancerous tumours, where the progression of tumours includes the invasiveness, metastasis, recurrence and increase in size of the tumour. The present sequence is human KDR (VEGFR-2) Fab antibody heavy chain protein.

 01-MAY-2003
 ABJ26766;
 ABJ26766 standard;
The invention relates to a novel antibody having a first antigen bindi site specific for a first vascular endothelial growth factor (VEGP) receptor and a second antigen-binding site specific as second VEGP receptor. The bispecific antigen-binding proteins block activation of VEGP receptor and are useful for reducing or inhibiting VEGP-induced cellular functions such as mitogenesis of vascular endothelial cells
 New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for treating tumors -

 The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (VEGF) receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of the VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leukaemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This sequence represents a human protein relating to the bispecific antibodies that bind to the VEGF receptors of the invention.

 This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a fragment of the human factor VIII antibody heavy chain variable region protein B04 which is used in the method of the invention.

 presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from the are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the factor VIII antibody A3-C1 specific scrv protein B04 which is used in the method of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 The invention relates to a novel method for the construction of a library of frecombinant antibodies. The novel method comprises clustering variable conference of a collection of antibodies having known 3D structures into at colleast two families of structural ensembles, each comprising at least two different antibody sequences but with substantially identical main chain conformations. The method is useful for constructing a library of conformaticials mitibodies in silico which provides a structurally diverse and conformaticially more relevant source of antibody candidates which can conformaticially more relevant source of antibody candidates which can conformaticial mucleic acids. The libraries constructed are useful as a source of antibody candidates for further screening for novel antibodies continum immunogenecity to human subjects treated with antibody therapeutics. This sequence represents a protein region of an antibody candidates to the novel antibody library construction method of the

 TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has hepatotropic, cytostatic, nephrotropic and cardiant activity. The human antibody is useful for decreasing an MMP-inhibiting activity of a TIMP-1. It is especially useful for ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic pulmonary fibrosis, benign prostate hypertrophy, lung cancer or colon cancer. The antibody is also useful for detecting a TIMP-1 in a test preparation, or in diagnosing a disorder in which a TIMP-1 level is elevated. The sequences shown in ABR01502-ABR01545 represent the heavy chain regions of a human anti-TIMP-1 antibody of the invention.
AAB67617-23 represent single chain antibody (scFv) fragments which are specific for human leukocyte antigen (HLA)-CW6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific

 for HLA-Cw6. The HLA-Cw6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HLA-Cw6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HLA-Cw6. The anti-HLA-Cw6 immunoglobulin fragments are useful for the preparation of a pharmaceutical for the treatment of humans. They are also useful for HLA phenotyping.

 human leukocyte antigen; immune system; immunosuppression; antibody; major histocompatibility complex; antirheumatic; antiarthritic; neuroprotective; antiinflammatory; antidiabetic; antiarchritic; immunosuppressive; dermatological; antithyroid; nephrotropic; psoriasis; ithyromimetic; hepatotropic; immune response suppressor; narcolepsy; rheumatoid arthritis; juvenile arthritis; multiple sclerosis; insulitis; grave's disease; insulin-dependent diabetes; Hashimoto's disease; systemic lupus erythematosus; ankylosing spondylitis; myasthenia gravis; transplant rejection; graft versus host disease; pemphigus vulgaris; glomerulonephritis; thyroidditis; panoreatitis; primary biliary cirrhosis; irritable bowel disease; Siograen's avmiroma
The present invention describes a composition (1), comprising a polypeptide comprising an antibody-based antigen-binding domain of human composition with binding specificity for an antigen expressed on the surface of a cell, where treating cells expressing the antigen with the polypeptides leads to suppression of an immune response, and the IC50 for the suppression of immune response is 1 microM or less (1) has antirheumatic, antiarthritic, neuroprotective, antiinflammatory, antidabetic, antisporiatic, immunosuppressive, dermatological, antithyroid, nephrotropic, thyromimetic and hepatotropic activities, and can be used as a suppressor of immune suppressing 11-2 secretion by a cell, the interaction of a cell of the immune system with another cell, immunosuppressing a patient and for killing a cell expressing an antigen, human leukocyte antigen (HLA)-DR
 Composition for suppressing immune response, treating diseases immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antige expressed on a cell surface

The IgG1, in its nascent form, bears no sialyl-Lex side chains. The inventors designed a molecule including several such sites for attachment of sialyl-Lex side chains (see AAR2442, FT). The additional N-linked glycosylation sites are introduced at locations which impair complement fixing and Fc receptor binding ability. They are preferably located in the CH2 region of the Ig molecule. Antibodies bearing multiple sialyl-Lex determinants are useful for disrupting undesirable interactions between cells or proteins. Disrupting this interaction has therapeutic applications, for

 The present sequence is the heavy chain variable region of a human CC tumour-specific monoclonal antibody. Neoplastic cells selectively express CC antigens which are not present on normal cells. Thus monoclonal CC antibodies can be produced that are specifically directed against CC antibodies can be produced that are specifically directed against CC cor cytostatic agents and used to selectively target cancer cells for the CC cimination of tumours. They can also be linked to diagnostic moieties CC that allow the imaging of meoplastic cells. Nucleic acids encoding human CC tumour-specific monoclonal antibodies can be used to express the CC antibodies and can be recombinantly engineered to produced modified CC antibodies with higher affinity or higher selectivity for tumour cells. The comparated by in vitro immunisation of human spleen cell cultures with CC generated by in vitro immunisation of human spleen cell cultures with CC was then isolated from the hybridoma by RT-PCR. The present sequence CC was produced by LH13 hybridoma cell line.

 The present invention relates to human anti-epidermal growth factor receptor single-chain antibodies (anti-EGFR-eGFVs) solated from a human IgM phage display library using EGFR as antisen. Two isolates with different amino acid sequences were identified. The anti-EGFR-eGFVs are useful for treating cancer, and for the diagnostic location and assessment of tumour growth, where the anti-EGFR-eGFV is radiolabelled. The present sequence represents human anti-EGFR single-chain antibody isolated from clone pSEX81-63.

 This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a fragment of the human factor VIII antibody heavy chain variable region protein DP-10 which is used in the method of the invention.

Modulating angiogenesis at a site, for treating or preventing metastasis, diabetic retinopathy, cardiovascular disease, wour supplying composition comprising variant Ryk protein to the si Examples; Page 79-80; 09-MAY-2001; 2001WO-US15043 N-PSDB; Roczniak S, 10-MAY-2000; 2000US-0568783 15-NOV-2001 2002-049443/06 BAYER Dubois-Stringfellow 81pp; Š Zolotorev the site ş

English

CC a composition comprising a variant Ryk protein (I) (a member of the CC receptor tyrosine kinase family), or modulating formation of cells into capillary-like structures by contacting the cells with a composition CC capillary-like structures by contacting the cells with a composition CC (preferably, within a human) or modulating the formation of cells (C (endothelial cells of human origin) into capillary-like structure. The CC (I) is useful for preventing, treating or ameliorating a medical CC condition e.g., cancer, metastasis, diabetic retinopathy, macular CC degeneration, cardiovascular disease, wound, pregnancy, or a clinical CC condition involving anglogenesis in the reproductive system, including CC regulation of placental vascularization in an individual. The variant CC protein is supplied to the individual as a source of polynucleotide concoding the protein and expressing the protein in vivo. (I) is used as an immunogen to produce an antibody against it. The antibodies are useful for modulating angiogenesis at a site. Polynucleotides encoding (I) is useful in gene therapy technique for treating above mentioned The invention relates to modulating angiogenesis at The sequence. (a member ý by supplying into

 tumour-specific monoclonal antibodies can be used to express the antibodies and can be recombinantly engineered to produced modified antibodies with higher affinity or higher selectivity for tumour cells. Tumour-specific antibodies were produced by hybridomas that were generated by in vitro immunisation of human spleen cell cultures with breast carcinoma cells. The nucleic acid encoding the monoclonal antibody was then isolated from the hybridoma by RT-PCR. The present sequence
 tumour-specific antigens. The antibodies can be conjugated to cytotoxic or cytostatic agents and used to selectively target cancer cells for the elimination of tumours. They can also be linked to diagnostic moieties that allow the imaging of neoplastic cells. Nucleic acids encoding human

 The present invention relates to human anti-epidermal growth factor receptor single-chain antibodies (anti-EGFR-eCFVs) isolated from a human IgM phage display library using EGFR as antigen. Two isolates with different amino acid sequences were identified. The anti-EGFR-eCFVs are useful for treating cancer, and for the diagnostic location and assessment of tumour growth, where the anti-EGFR-eCFV is radiolabelled. The present sequence represents human anti-EGFR single-chain antibody isolated from clone pSEX81-63.

 The invention relates to a novel purified preparation of a human antibody, which binds to a tissue inhibitor of metalloprotease-1 (TIMP-1) and neutralises a matrix metalloprotease (MMP)-inhibiting activity of TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has hepatotropic, cytostatic, nephrotropic and cardiant activity. The human antibody is useful for decreasing an MMP-inhibiting activity of a TIMP-1. It is especially useful for ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary

 AAB67617-23 represent single chain antibody (scFv) fragments which are specific for human leukocyte antigen (HAA)-Cv6. The fragments are derived from a synthetic human combinatorial antibody library based on molecular consensus frameworks and CDRs randomised with trinucleotides. The specification describes a human immunoglobulin fragments specific for HIA-Cv6. The HIA-Cv6 serotype is considered highly relevant in studies of natural killer cell silencing as well as miscarriages. HIA-Cv6 demonstrates a disequilibrium in some recurrent abortions. Psoriasis may also be linked to HIA-Cv6. The anti-HIA-Cv6 immunoglobuli fragments are useful for the preparation of a pharmaccutical for the treatment of humans. They are also useful for HIA phenotyping.
 pulmonary fibrosis, benign prostate hypertrophy, lung cancer or cancer. The antibody is also useful for detecting a TIMP-1 in a t preparation, or in diagnosing a disorder in which a TIMP-1 level elevated. The sequences shown in ABR01502-ABR01545 represent the chain regions of a human anti-TIMP-1 antibody of the invention.
 Novel isolated human immunoglobulin or functional immunoglobulin fragment specific for human leukocyte antigen Cw6, useful for troof humans and for human leukocyte antigen phenotyping -

 TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has hepatotropic, cytostatic, nephrotropic and cardiant activity. The human antibody is useful for decreasing an MMP-inhibiting symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic pulmonary fibrosis, benign prostate hypertrophy, lung cancer or colon cancer. The antibody is also useful for detecting a TIMP-1 in a test preparation, or in diagnosing a disorder in which a TIMP-1 level is elevated. The sequences shown in ABRO1502-ABRO1545 represent the heavy chain regions of a human anti-TIMP-1 antibody of the invention.

This invention relates to a novel humanised, chimeric or human monoclonal antibody or its antigen binding portion that specifically binded to insulin-like growth factor I receptor (IGF-IR). The antibodies of the invention can act as an inhibitor of binding of IGF-I or IGF-II with IGF-IR and can inhibit in vivo tumour growth and IGF-IR tyrosine phosphorylation. The antibodies of the invention are useful for diagnosing the presence or location of an IGF-IR-expressing tumour in a subject. The antibody or its antigen-binding portion is also useful for reating cancer in a human. The method for this further involves an antimeopatatic, anti-tumour, anti-tumoidenic or chemotherapeutic agent. The antibodies may also be useful for intreasing IGF-IR activity and thus restoring IGF-IR activity in a condition characterised by low IGF-IR levels e.g. neuropathy, or osteoporosis. An antibody of the invention is also useful for inducing apoptosis of specific cells in a patient, and to treat non-cancerous states or disease, e.g. acromegaly, gigantism, psoriasis and atherosclerosis. Fully human anti-IGF-IR antibodies minimise the immunogenic and allergic responses intrinsic to mouse or mouse-derivatised monoclonal antibodies and thus increase the concerned of the second of the second of the concerned of the second of the increasents an anti-insulin-like growth factor I receptor antibody of the

```
The present invention describes a method for identifying and obtaining an inhibitor of a pathological process. The method comprises determining if a compound is capable of modulating the binding of the Fc-epsilon-R1 receptor alpha-chain and a autoantibody against its alpha-chain. Also described: (1) use of the autoantibody against the Fc-epsilon-R1 receptor alpha-chain for identifying and obtaining an inhibitor of a pathological process; (2) use of the identified inhibitor for inhibiting activity of the autoantibody against the Fc-epsilon-R1 receptor alpha-chain; and city a compound identified by the method, which binds but does not activate the receptor; and (4) a polypeptide capable of specific binding to the Fc-epsilon-R1 receptor alpha-chain. The method is useful for obtaining an inhibitor of a pathological process e.g. imbalance between cell-bound and free IgE e.g. altergic descase (urticaria, late phase allergic reactions, intrinsic asthma, drug intolerance and food intolerance), IgE mediated disease or malignancy. The compound is useful autoimmunity. The present sequence represents a human recombinant autoimmunity respections.

cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)).  The invention relates to a novel method for the construction of a library of recombinant antibodies. The novel method comprises clustering variable regions of a collection of antibodies having known 3D structures into at least two families of structural ensembles, each comprising at least two different antibody sequences but with substantially identical main chain conformations. The method is useful for constructing a library of

a cell expressing CCR2. They are useful for inhibiting or treating
HIV infection. The proteins of the invention are useful for inhibiting
leukocyte trafficing, for treating CCR2-mediated disorders such as
leukocyte trafficing, for treating CCR2-mediated disorders such as
inflammatory disorder, autoimmune disorders such as rheumatoid
arthitis and multiple sclerosis, atherogenesis and atherosclerosis,
and for inhibiting restenosis. They are useful in therapy or disgnosis,
and in the manufacture of a medicament for treating CR2-2 mediated
disease. They are also useful for treating allergy, anaphylaxis,
malignancy, chronic and acute inflammation, histamine and IgB-
mediated allergic reaction, shock, stenois, allograft rejection,
fibrotic disease, asthma, inflammatory glomerulopathies, acquired
intervention, including angioplasty and/or stent placement in a mammal.
Humanised antibodies are also useful for inhibiting narrowing of the
lumen of a vessel in a mammal, and inhibiting neointimal hyperplasia of
a vessel in a mammal, preferably associated with vascular intervention.
The present sequence is human heavy chain variable (VH) region, 038064.

This invention relates to a novel humanised, chimeric or human monoclonal antibody or its antigen binding portion that specifically binds to insulin-like growth factor I receptor (IGF-IR). The antibodies of the invention can act as an inhibitor of binding of IGF-I or IGF-II with IGF-IR and can inhibit in vivo tumour growth and IGF-IR tyrosine phosphorylation. The antibodies of the invention are useful for diagnosing the presence or location of an IGF-IR-expressing tumour in a subject. The antibody or its antigen-binding portion is also useful for treating cancer in a human. The method for this further involves an antinoplastic, anti-tumour, anti-angiogenic or chemotherapeutic agent. The antibodies may also be useful for increasing IGF-IR activity and replastic, anti-tumour, anti-angiogenic or chemotherapeutic agent. The antibodies may also be useful for increasing IGF-IR activity and invention is also useful for inducing apoptosis of specific cells in a invention is also useful for inducing apoptosis of specific cells in a patibodies minimise the immunogenic and allergic responses intrinsic to mouse or mouse-derivatised monoclonal antibodies and thus increase the efficacy and safety of the administered antibodies and thus increase the represents an anti-insulin-like growth factor I receptor antibody of the

 The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a

presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a fragment of the human factor VIII antibody heavy chain variable region protein DP-47 which is used in the method of the invention.

 δ
 hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has presence of a human antibody with factor VIII specificity which has presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents a human factor VIII antibody A2 specific scPv protein DP-47 which is used in the method of the invention.
 ö
 This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the
